

Commercial Cycle Water Heater

This is a commercial cycle series water heater. It is designed for reliable hot water supply in commercial applications and features multiple heat exchanger coils and advanced control systems.

Overview

Commercial Cycle Water Heater

This high-efficiency commercial cycle water heater is engineered for reliable and consistent hot water supply in demanding environments such as hotels, hospitals, and large residential buildings. Utilizing advanced intelligent inverter technology and a high-performance heat exchanger, the unit delivers significant energy savings, offering up to four times the heating efficiency of standard systems. Designed for safety and durability, it features a robust construction with water-electricity separation and precise temperature management.

Key Features

Core Technologies

- Intelligent inverter technology
- Water-electricity separation
- Anti-frost design
- Advanced temperature control

Safety Features

Over-temperature protection, Pressure relief valve, Water/Electricity separation

Technical Specifications

Performance Metrics

4 x

Heating Performance Factor

Heat Exchanger Components

Component	Material/Feature
Foil	Hydrophilic aluminum
Tube	Grooved copper

Installation & Maintenance

Installation

Outdoor Installation • Easy Maintenance
