

Commercial Rooftop Solar Panel System, 1MW

This 1MW solar panel system is designed for commercial rooftop installation. The system utilizes crystalline silicon panels to convert sunlight into electricity.

Project Overview

System Introduction

This 1MW commercial rooftop solar installation is a high-performance energy solution designed for industrial applications. As a certified demonstration project, it emphasizes reliability and clean energy integration. The system utilizes optimized polycrystalline technology to achieve excellent energy output and site-specific performance efficiency.

Technical Specifications

Total System Capacity	1 MW
Performance Ratio (PR)	79 %
String Inverter Capacity	200 KW
Module Peak Power	240 W
PV Module Technology	Polycrystalline

Compliance and Recognition

Project Awards

- 2010 Golden Sun Subsidy Project
- 2010 Demonstration Project of Clean Energy in Binhai Area

Certifications	CQC Certified, CCC Eligible
