

Compact Electric Space Heater with PTC Technology

This compact electric heater provides 1000W or 2000W of heating power. It features cool, warm, and hot wind settings, overheat protection, a safety tip-over switch, and 90-degree oscillation.

Overview

Compact PTC Heating Solution

This compact electric space heater utilizes advanced PTC (Positive Temperature Coefficient) technology to provide efficient and consistent heating for personal or small-space environments. Designed with portability in mind, it features an integrated handle and adjustable thermostat settings, allowing users to customize their comfort level easily. Built for safety and durability, the unit is constructed from robust plastic and includes essential protective features for peace of mind during indoor operation.

Technical Specifications

Heating Technology	PTC (Positive Temperature Coefficient)
Intended Use	Indoor, Personal Space, Small Room
