Overview

Equipped with a versatile bucket and leveling blade for diverse site tasks.

Compact Excavator Overview

This compact excavator is engineered for versatile performance in small to medium-sized construction projects, landscaping, and utility work. It features a robust hydraulic system for efficient digging and lifting, paired with a crawler undercarriage that ensures stability and maneuverability across various terrains. Designed with operator comfort in mind, the unit includes an enclosed cabin with an ergonomic seat and intuitive controls.

Technical Specifications

Powerful and fuel-efficient engine designed for heavy-duty construction environments.

Emission Standard

Euro II

Operating Weight	7280 kg
Engine Model	CUMMINS B3.8
Engine Power	45 kW
Boom Length	3710 mm

Cabin & Comfort

Ergonomic cabin design with intuitive instrumentation for monitoring machine status.

The operator seat is fully adjustable to reduce fatigue during long shifts.

Cabin Amenities

- Spacious cab with wide vision
- Four-sided tempered glass
- Openable front window
- Silicone oil shock absorbers
- Ergonomically adjustable seat
- Digital high-power air conditioner

Hydraulic System

Advanced hydraulic control system ensuring smooth and coordinated movements.

Hydraulic System Features

- Toshiba hydraulic system
- Pressure compensating valves
- PVC variable pumps with constant-power control
- Automatic energy-saving standby state
- Rotary reduction gear with cushion valve
