

Compact Prefabricated Substation Enclosure

This compact enclosure is designed for outdoor installation of electrical equipment, including transformers and switchgear. Constructed from durable materials, it ensures long-term reliability and efficient power distribution in residential, commercial, and industrial settings.

Overview

Compact Prefabricated Substation Enclosure

This prefabricated compact substation enclosure is engineered for secure outdoor electrical power distribution. It provides a robust, weatherproof housing for critical equipment including transformers, switchgear, and control panels. Designed for long-term reliability, the unit features a pitched roof for effective water runoff and secure locking mechanisms to ensure safety in residential, commercial, and industrial environments.

Design & Construction

Installation Type	Outdoor
Roof Design	Pitched for water runoff
Security Features	Secure locking mechanisms, Weatherproof construction

Applications & Compatibility

Housed Equipment

- Transformers
- Switchgear
- Control panels

Target Sectors

Residential • Commercial • Industrial
