

Compact Track Loader

This compact track loader is equipped with a double-pattern rubber pedrail, reducing ground pressure for operation on soft soil. Its electro-hydraulic checking brake ensures quick response and efficient speed reduction.

ADDITIONAL IMAGES

Product Overview

The HT65L offers superior maneuverability and stability on uneven terrain.

Versatile Compact Track Loader

The HT65L is a robust compact track loader engineered for high performance in construction, landscaping, and agricultural tasks. It features an advanced pedrail running system that significantly reduces ground pressure, making it ideal for operating on soft soil. With an integrated electro-hydraulic braking system and reliable Perkins engine power, this machine offers exceptional maneuverability and efficiency in demanding work environments.

Performance Metrics

Engineered with a robust hydraulic system for high efficiency.

Operational Capacity

1990 kg

Tipping Load

995 kg

Rated Operating Capacity

63 HP

Engine Power

Technical Specifications

Rated Machine Mass	2950 kg
Engine Model	Perkins 804C-33

Product Features

Core Advantages

- Double-pattern rubber pedrail system for low ground pressure
- Integrated electro-hydraulic braking for quick response
- Simplified internal hydraulic members to improve reliability
- Optimized structural stability for vertical and horizontal balance
- Increased ground clearance
