

Computer Keyboard

The computer keyboard is an essential input device for computers. Its internal structure supports the keys and ensures proper key alignment for smooth keystrokes.

Product Overview

Professional Grade Keyboard Construction

This keyboard is engineered with a focus on structural integrity and precision manufacturing. Featuring a robust frame designed for rigidity and long-term durability, the internal assembly ensures consistent key alignment and smooth keystroke performance. It is an ideal choice for environments requiring reliable and responsive input hardware.

Construction & Design

Frame Material	Aluminum or metal alloy
Internal Structure	Precision-molded plastic
Key Features	Rigid Frame, Precision Molded, High Durability
