

Computer Network Management Software

This software facilitates computer network management. It enables interaction and control over connected terminals, supporting a client-server architecture.

Product Overview

Professional Network Management Suite

This network management software provides a centralized interface for monitoring and controlling connected terminal devices. By utilizing a robust client-server architecture, it ensures seamless interaction between the host control station and secondary nodes. It is designed to streamline administrative tasks and improve the efficiency of managing multi-terminal environments.

Technical Specifications

Architecture	Client-Server
System Compatibility	Networked Systems, Multi-Terminal, Centralized Control

Core Features

Key Functional Features

- Centralized network monitoring
- Terminal node control
- Graphical user interface interaction
- Wired hardware integration
