

Computer Peripheral with Clear Housing

This computer peripheral features a clear plastic housing. It includes multiple ports and connects to a separate component via a cable.

Product Overview

Transparent Design Architecture

This advanced computer peripheral features a distinctive clear housing, offering full visibility into its internal components and high-quality build. Designed for modern workstations, the device integrates multiple connectivity ports to streamline peripheral management. Its modular construction, including a secondary connected component, provides versatile utility for professional computing environments.

Technical Specifications

Design Features

See-through chassis • Modular cable design

Housing Material	Transparent high-impact plastic
Connectivity	Multi-port, Wired
Configuration	Main hub with secondary tethered component
