

Computerized Flat Knitting Machine

This high-performance computer knitting machine is designed for versatile and efficient production of knitted fabrics. It features electronic needle selection, variable speed control, and pattern design software for creating intricate designs.

Overview

High-Performance Knitting Solution

This computerized flat knitting machine is engineered for the versatile and efficient production of high-quality knitted fabrics. It features advanced electronic needle selection and variable speed control, allowing for precise manufacturing capabilities. With integrated pattern design software, it supports the creation of intricate and complex textile designs suitable for a wide range of apparel applications.

Technical Specifications

Suitable Applications

- Apparel Manufacturing
- Textile Production
- Intricate Pattern Knitting

Model Identifier	YJ-352
Control System	Electronic Needle Selection, Variable Speed Control, Digital Pattern Design
