

Computerized Flat Knitting Machine

This computerized flat knitting machine is designed for producing a wide range of knitted fabrics. It features advanced control systems for precise stitch formation and pattern creation.

Overview

High-Efficiency Flat Knitting Technology

The LXC-252 is a professional-grade computerized flat knitting machine engineered for high-precision fabric production. It features an advanced control system that allows for intricate stitch formation and complex pattern creation. With its robust construction and multi-yarn carrier system, this machine is designed to deliver reliable performance and versatility for demanding textile applications.

Technical Specifications

Model Number	LXC-252SCV
Machine Type	Computerized Flat Knitting

Key Features

Performance Highlights

252
Model Series

Design Capabilities	Intricate Color Design, Complex Structure Design, Precise Stitch Formation
