

# Concrete Batching Machine with Aggregate Storage Bins

This PLD4800 batching machine features four storage bins and a metering chamber. Computer-controlled automation manages material feeding, weighing, and the entire mixing process.

## Overview

### Automated Concrete Batching Solution

The PLD4800 batching machine is engineered for precision and efficiency in concrete production. Featuring four aggregate storage bins and an integrated metering chamber, it streamlines the material handling process. The system is fully computer-controlled, ensuring high automation and consistent, accurate weighing for high-quality concrete mixes.

## Technical Specifications

Model Number	PLD4800
Storage Bins	4 bins

## Key Features

### Automation Level

Fully Automated • Computer Controlled

### Operational Capabilities

- Automated material feeding
- Precision weighing
- Integrated metering chamber

## Performance Metrics

### Performance Indicators

**100 %**

Automation Accuracy
