

Concrete Block Forming Machine

This machine is a robust and efficient solution for producing concrete blocks, pavers, and bricks. It features a hydraulic system for powerful pressing and molding, ensuring high-density and uniform blocks.

Product Overview

Professional Concrete Block Solution

The QT10-15 block forming machine is a high-performance, automated solution designed for the efficient production of concrete blocks, pavers, and bricks. Utilizing a powerful hydraulic system, it ensures high-density, uniform output for diverse construction requirements. Its automated control system and easy mold changeover capabilities make it an ideal choice for streamlining production in both large and small-scale facilities.

Technical Features

Key Functionalities

- Automated material feeding system
- High-pressure hydraulic compaction
- Vibration-assisted molding
- User-friendly interface
- Rapid mold changeover

Compliance and Standards

Automated, Hydraulic, Heavy-Duty

Performance

Production Capabilities

10 Blocks/Cycle

Cycle Efficiency
