

Cone Crusher for Mining and Aggregate Production

The cone crusher is a robust and efficient machine designed for crushing various types of materials in mining, aggregate production, and recycling applications. It features adjustable settings, hydraulic adjustment, and a reliable lubrication system.

Product Overview

High-Efficiency Cone Crusher

This robust cone crusher is engineered for demanding applications in mining, aggregate production, and material recycling. Utilizing a conical crushing chamber, it achieves precise material size reduction through a combination of compression and attrition. Designed for secondary and tertiary crushing stages, the unit ensures high throughput and consistent output quality, supported by a heavy-duty frame and wear-resistant internal components.

Operational Features

Operational Features

- Adjustable output size settings
- Hydraulic adjustment system for ease of operation
- Integrated reliable lubrication system
- Extended component life design

Applicable Crushing Stages

Secondary Crushing, Tertiary Crushing

Construction

Construction Details

Heavy-duty construction • Wear-resistant components
