

# Connecting Rod Bearing Set

Connecting rod bearing sets provide a low-friction, durable surface for connecting rods. The bearing shells are designed for optimal fit and performance, ensuring proper oil clearance.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Connecting Rod Bearings

This connecting rod bearing set is engineered to provide a low-friction, durable interface between the connecting rod and the crankshaft journal. Precision-machined to exacting standards, these bearings ensure optimal oil clearance and surface integrity to withstand high-load, high-temperature engine environments. Designed for reliability, this set helps reduce mechanical wear and prevent premature engine damage in demanding automotive applications.

## Technical Details

### Size Classification

STD

### Identification Markings

- HKS
- 2377H
- HK

### Compatible Engine Makes

MERCEDES-BENZ, FIAT, IVECO, CATERPILLAR, TOYOTA, NISSAN, ISUZU, CUMMINS, BMW

## Performance Metrics

### Key Performance Attributes

**1 High**

Friction Reduction

**1 High**

Temperature Resistance
