

Construction Equipment Gearbox

This heavy-duty gearbox is designed for construction machinery applications. It features a multi-stage gear reduction system housed in a durable casing for efficient power transmission and reliable performance.

Overview

Construction Machinery GEARBOX KT23

The KT23 is a heavy-duty gearbox specifically engineered for demanding construction machinery applications. Featuring a robust multi-stage gear reduction system within a durable casing, it ensures efficient power transmission and reliable performance. This unit is designed to maximize productivity and minimize downtime in equipment such as excavators, loaders, and graders.

Technical Specifications

Model	KT23
Compatible Equipment	Excavators, Loaders, Graders

Performance Features

Key Performance Metrics

1 Multi-stage
Gear Reduction System

Design Advantages

- High torque capacity
- Durable casing construction
- Precision-engineered gears
- Extended service life
