

Construction Plate Compactor

This construction plate compactor is a powerful machine for compacting soil, gravel, and asphalt in construction and landscaping. With a robust engine, it delivers high compaction force for efficient results.

Overview

Professional Compaction Performance

This construction plate compactor is a powerful and reliable machine engineered for efficient soil, gravel, and asphalt compaction. Designed to withstand demanding job site conditions, it features a heavy-duty base plate and a robust engine that delivers high compaction force. With its vibration-dampening handle and intuitive, easy-to-reach controls, this unit ensures both high performance and operator comfort for professional construction and landscaping projects.

Key Features

Key Features

- Heavy-duty base plate for durability
- Vibration-dampening handle for operator comfort
- Easy-to-reach control interface
- High compaction force engine

Applications

Suitable Applications

Soil Compaction, Gravel Compaction, Asphalt Compaction, Landscaping, Construction

Design

Operator Features

Vibration Dampening • Ergonomic Controls • Durable Construction
