

Construction Site Tower Crane

This tower crane is used on construction sites for lifting heavy materials. It features a vertical mast with a horizontal jib and a hook for lifting.

Product Overview

High-Performance Tower Crane

This construction site tower crane is engineered for demanding high-rise building projects, providing robust vertical and horizontal material handling capabilities. Featuring a durable vertical mast and a precision-balanced horizontal jib, it ensures stability and efficiency during heavy lifting operations. The design incorporates a counterweight system to maintain balance, making it an essential asset for safe and productive construction site logistics.

Technical Specifications

Key Design Elements

- Vertical mast structure
- Horizontal jib reach
- Counterweight balance system
- Heavy-duty lifting hook

Crane Configuration

Tower Crane, High-Rise Construction, Heavy Lifting

Operational Performance

Primary Application

Material Handling • Vertical Transport • Construction Site Logistics
