

Continuous Billet Casting Machine

This continuous billet casting machine is designed for high-volume production of steel billets. It features a multi-strand casting system with advanced cooling technology for uniform solidification.

Overview

High-Efficiency Billet Casting

This continuous billet casting machine is engineered for the high-volume production of steel billets. It utilizes a multi-strand casting system integrated with advanced cooling technology to guarantee uniform solidification and superior billet quality. Designed for demanding industrial environments, the system features robust construction and automated controls to optimize casting speed and dimensional accuracy.

Technical Specifications

Casting System	Multi-strand
Key Features	Automated Control, Advanced Cooling, High-Volume Production, Uniform Solidification

Operational Safety

Safety and Monitoring

- Integrated safety systems
- Real-time production monitoring
- Automated process control
