

Continuous Flow Grain Dryer

The continuous flow grain dryer is engineered for the efficient and uniform drying of various grains. It features a modular design that allows adjustable drying parameters to suit different grain types and moisture levels.

Overview

Continuous Flow Grain Dryer

The NEW PRO-120H series grain dryer is a high-capacity, continuous-flow solution engineered for efficient and uniform drying across various grain types. Designed with a modular architecture, it facilitates easy assembly and maintenance while offering adjustable parameters to handle diverse moisture levels. Advanced sensors and integrated controls ensure precise temperature and airflow management, optimizing performance while minimizing overall energy consumption.

Technical Specifications

Control System

- Advanced Sensors
- Precise Temperature Management
- Airflow Control

Drying Method

Continuous Flow

Design Features

Modular Design, High-Capacity, Adjustable Parameters

Reliability

Construction Quality

Robust Construction • Durable Components
