

Continuous Metal Casting Machine

This continuous casting machine is designed for industrial metal processing. It features a robust frame, multiple rollers, and hydraulic systems for shaping molten metal into billets, slabs, or profiles.

Overview

Industrial Continuous Casting Solution

This heavy-duty continuous casting machine is engineered for high-volume metal processing, designed to deliver consistent performance in demanding industrial environments. It features a robust structural frame, precision-engineered rollers for shaping molten metal, and advanced hydraulic systems for exacting control. Ideally suited for the production of metal billets, slabs, or profiles, this equipment ensures durability and reliability for continuous manufacturing operations.

Technical Capabilities

Core Components

- Robust structural frame
- Precision shaping rollers
- Hydraulic control systems

Operational Suitability

High-volume production • Demanding environments

Production Capabilities

Billets, Slabs, Profiles
