

Continuous Oil-Burning Drying Line

This industrial drying line uses oil-burning for continuous material processing. It includes a conveyor belt, a drying chamber with temperature control, and an exhaust system.

Overview

Continuous Oil-Burning Drying Line

This industrial-grade drying line is engineered for high-throughput material processing. It features an advanced oil-burning system designed to maximize thermal efficiency while maintaining low energy consumption. With its continuous conveyor belt design and integrated temperature controls, the system ensures uniform drying results across a wide range of applications.

Performance Metrics

Thermal Efficiency

High Efficiency

Energy Consumption

Ease of Use

Convenient to operate

Applicability

Good applicability

System Components

Core Components

- Conveyor belt transport system
- Enclosed drying chamber
- Temperature control unit
- Exhaust system
