

Continuous Web Coating and Printing Line

This industrial machinery is a multi-stage coating and printing line. It is used for applying coatings, laminates, or printing patterns onto a continuous web of material.

Overview

Continuous Web Coating and Printing Line

This industrial machinery is designed for high-volume, continuous processing of web materials. It features a multi-stage configuration capable of performing complex operations such as coating, printing, and laminating in a single automated pass. Built for efficiency, the system integrates advanced material handling rollers and precise control stations to ensure consistent output quality.

Technical Capabilities

Processing Stations

- Coating
- Printing
- Laminating
- Drying
- Curing

Automation Level

Continuous Process • Automated Control

Design & Construction

Structural Design	Multi-stage elevated platform design with integrated access ladder
Material Handling	Multi-roller web transport system
Control System	Yes
