

Cooling Mixer 200-10000L

The cooling mixer is available in horizontal and vertical configurations, offering efficient mixing and cooling. With capacities ranging from 200 to 10000 liters, the mixers are designed for optimal performance and durability.

Product Overview

Industrial Cooling Mixer Series

The SHL Series offers versatile mixing and cooling solutions designed for high-performance industrial applications. With capacities ranging from 200 to 10000 liters, these units cater to diverse production needs, specifically within the plastic and rubber industries. Available in both horizontal and vertical configurations, the mixers prioritize temperature control and thorough blending to ensure consistent output quality.

Technical Specifications

Capacity Range

200 L

Minimum Capacity

10000 L

Maximum Capacity

Configuration Types

Horizontal (SHL-W), Vertical

Design Features

Horizontal Configuration Details

Features a cylindrical mixing chamber with specialized internal blades designed for thorough mixing processes.

Vertical Configuration Details

Provides a compact footprint, ideal for facilities with space constraints.

Industrial Applications

Suitable Industries

- Plastic Industry
- Rubber Industry
