

Corrugated Flange with Braided Sleeve

This flange features a corrugated section enclosed in a braided sleeve. It is designed for industrial applications needing flexible connections and vibration dampening.

Overview

Industrial Flexible Connection

The Corrugated Flange with Braided Sleeve is an engineered component designed for demanding industrial environments. Featuring a corrugated core protected by a durable braided sleeve, this assembly provides critical flexibility and vibration dampening for piping systems. It is equipped with robust end flanges and supporting structures to ensure secure, reliable integration into your infrastructure.

Technical Specifications

Key Dimensions

- L (Overall Length)
- L1 (Flange/End Section Length)

Primary Applications

Industrial Piping • Vibration Isolation • Thermal Expansion Compensation

Design Features

Corrugated Core, Braided Sleeve Protection, Vibration Dampening, Flexible Connection

Component Type

Corrugated Flange Assembly
