

Countertop Dual-Cylinder Water Filter

This countertop water filter features a dual-cylinder design. It is constructed from polished stainless steel and designed to improve water quality by removing impurities.

Product Overview

High-Efficiency Countertop Filtration

This dual-cylinder countertop water filtration system is engineered to deliver high-quality, purified water for professional and household environments. Utilizing a multi-stage combined filter (PP+GAC) and an ultrafiltration membrane, it ensures a high level of water clarity. The unit is designed for reliable performance with a significant capacity capable of serving 30-50 people.

Operational Specifications

Operating Pressure Range

0.1 Mpa

Minimum Pressure

0.5 Mpa

Maximum Pressure

Outflow Rate

0.6 L/min

Min Flow

2 L/min

Max Flow

Water Temperature Range

5-38°C

Filtration Performance

Filtration Media	PP, GAC, UF Membrane
Filtration Precision	0.01 μ m
Output Turbidity	d1.0NTU

Capacity and Design

Model ID	CJ-1 BS2
Capacity	30-50 people
