

CR2016 Lithium Manganese Dioxide Button Cell Battery 3V

The CR2016 is a 3V lithium manganese dioxide button cell battery commonly used in small electronic devices. It features a high energy density and a long shelf life.

Overview

High-Performance CR2016 Lithium Battery

The CR2016 is a reliable 3V lithium manganese dioxide button cell battery designed for a wide range of compact electronic devices. It offers high energy density and a long shelf life, ensuring consistent power delivery for critical applications. With its stable voltage output and wide operating temperature range, it provides dependable performance in portable electronics.

Technical Specifications

Nominal Voltage	3 V
Chemical System	Lithium Manganese Dioxide

Physical Dimensions

Diameter	20 mm
Thickness	1.6 mm

Key Features

Performance Highlights

3 V Voltage	20 mm Diameter	1.6 mm Thickness
-----------------------	--------------------------	----------------------------

Attributes	Lithium Manganese Dioxide, 3V, Button Cell, High Energy Density
------------	---

Applications

Typical Applications

- Watches
- Calculators
- Remote controls
- Portable electronic devices
