

CUT160 Inverter MOSFET Plasma Cutter

This plasma cutter uses soft-switching technology for enhanced efficiency and stable performance. It cuts metal sheets of varying thicknesses into diverse shapes with a narrow seam and smooth finish.

Overview

Industrial Cutting Performance

The INVERTER MOSFET CUT160 is a robust and efficient cutting machine engineered for demanding industrial applications. Utilizing advanced inverter technology, it delivers stable, precise cutting performance across a variety of materials and thicknesses. Designed for ease of use and longevity, the unit features an integrated cooling system and intuitive controls for adjustable current and gas management.

Technical Specifications

Rated Current

160 A

Rated Current

Technology

Inverter • MOSFET

Features & Controls

Control Interface

- Adjustable Current Settings
- Gas Control
- Current Meter
- Weld Control
- Pilot Arc

Operational Details

Cooling System

Yes

Mobility Features

Mounted on wheels for easy maneuverability
