

Cylinder Honing Brushes

Cylinder honing brushes contain abrasive nylon filaments bonded to flexible stems. They provide surface finishing, deburring, and edge blending in cylinders and bores.

Product Overview

Professional Cylinder Honing Brushes

These cylinder honing brushes are engineered with abrasive nylon filaments bonded to flexible stems, designed for precision surface finishing, deburring, and edge blending. They are ideal for use in various cylinders and bores, providing consistent results across different materials. Their flexible design ensures excellent conformability, making them a reliable choice for professional surface treatment applications.

Technical Specifications

Compatible Workspaces

- Cylinders
- Bores

Available Variations

Multiple Grit Sizes • Various Diameters

Filament Material	Abrasive Nylon
Primary Applications	Surface Finishing, Deburring, Edge Blending
