

Cylindrical Vibration Isolation Mounts

These cylindrical vibration isolation mounts are designed to reduce noise and vibration in machinery and equipment. They feature a durable metal outer shell and a resilient, energy-absorbing inner core.

Product Overview

Cylindrical Vibration Isolation Mounts

These cylindrical vibration isolation mounts are engineered to effectively reduce noise and vibration in industrial machinery and equipment. Featuring a durable metal outer shell paired with a resilient, energy-absorbing inner core, they provide reliable performance under various operational conditions. These mounts are an essential solution for applications such as motors, pumps, and compressors where precise vibration control is critical to equipment longevity.

Technical Specifications

Construction Features

- Durable metal outer shell
- Resilient energy-absorbing inner core
- Cylindrical geometry

Customization Options

Various Sizes • Multiple Durometers

Ideal Applications

Motors, Pumps, Compressors, Industrial Machinery
