

Data Transmission Modem Modules

These modem modules facilitate data transmission and communication. They are designed for integration into electronic systems, featuring shielded components and multiple connectivity pins.

Product Overview

High-Performance Modem Modules

These data transmission modem modules are engineered for reliable communication and integration into complex electronic systems. Featuring robust shielding and precise coaxial connectors, they are designed to handle radio frequency signals with high integrity. Their versatile pin configurations allow for seamless implementation in various industrial and communication applications.

Technical Specifications

Available Models

- MBM-01
- MBM-07
- MBM-13
- MBM-15

Design Qualities

Shielded • Industrial Grade • Integrated System Ready

Connectivity Features

Coaxial Connectors, Multi-pin Interface, RF Signal Handling

Manufacturing Data

Production Codes

Model	Production Date Code
MBM-13	200506141
MBM-01	200506071
MBM-13	200505021
MBM-07	200505046
MBM-15	200505021
