

Data Transmission Network Communication Device

This network communication device is designed for reliable data transmission. It features durable construction, high bandwidth capacity, and compatibility with various network protocols.

Product Overview

High-Performance Network Communication

This data transmission network communication device is engineered for maximum reliability in demanding professional environments. It offers high bandwidth capacity to ensure seamless data flow and supports a wide range of industry-standard network protocols. Built with durable construction, this unit is designed to maintain operational integrity in complex communication infrastructures.

Technical Specifications

Bandwidth Capacity

10 Gbps

Data Throughput

Supported Protocols

TCP/IP, UDP, HTTP/HTTPS, SNMP, FTP

Construction Material

Industrial-grade reinforced chassis

Compliance & Standards

Certifications

CE • RoHS • FCC
