

DC Inverter Arc MMA Welder

This DC inverter arc welder is designed for manual metal arc (MMA) welding. It offers adjustable settings for optimal arc control and features safety measures for protection against overcurrent and overheating.

Overview

Professional DC Inverter Welder

This high-performance DC inverter welding machine is engineered for manual metal arc (MMA) welding applications. It features advanced inverter technology for efficient power conversion and stable arc performance, making it highly reliable for both workshop and on-site projects. Designed with versatility in mind, the unit handles a wide range of welding rods and accommodates varying power grid conditions.

Technical Performance

Welding Current Range

30 A

Min Current

250 A

Max Current

Welding Type

MMA • DC Inverter

Key Features

Operational Advantages

- High no-load voltage for versatile rod compatibility
- Wide voltage input range for non-professional power grids
- Integrated overcurrent protection
- Thermal overheating protection

Design

Compact and portable design suitable for on-site and workshop use
