

Deep Well Submersible Pump

This deep well submersible pump efficiently extracts water from deep boreholes. Its stainless steel construction ensures corrosion resistance and lasting performance, making it suitable for various applications.

Overview

High-Performance Deep Well Pump

This high-performance submersible pump is engineered for efficient water extraction from deep boreholes. Constructed with durable stainless steel, it offers excellent corrosion resistance and reliability in demanding environments. Featuring a multi-stage impeller system, it delivers optimal hydraulic performance and high flow rates, making it suitable for irrigation, water supply, and industrial applications.

Technical Features

Key Performance Indicators

6 stages

Impeller Stages

Construction Material

Stainless Steel

Suitable Applications

Irrigation, Water Supply, Industrial Use

Electrical Components

Connection Features

- Multiple connection points
- Secure wiring organization
- High thermal insulation

Terminal Block Material

High-temperature ceramic
