

Deep Well Submersible Water Pump

This deep well submersible pump is engineered for efficient water extraction from deep underground sources. Its robust motor and advanced hydraulic design ensure optimal performance and reliability for consistent water flow.

Product Overview

High-Performance Submersible Solution

This deep well submersible water pump is engineered for efficient water extraction from deep underground sources. Constructed with durable stainless steel, it offers exceptional longevity and resistance to corrosion. It is a versatile solution suitable for irrigation, domestic water supply, and various industrial applications.

Technical Specifications

Recommended Applications

- Agricultural Irrigation
- Domestic Water Supply
- Industrial Water Extraction

Material	Stainless Steel
Key Features	Corrosion Resistant, Submersible Design, Robust Motor, Advanced Hydraulic Design

Safety & Operation

Included Components

Control Box

Safety Protections

- Electrical Fault Protection
