

Deep Well Submersible Water Pump

This deep well submersible pump efficiently extracts water from boreholes and wells. It is constructed from durable materials, ensuring longevity and reliability.

Product Overview

High-Performance Water Extraction

This deep well submersible pump is engineered for efficient water extraction from boreholes and wells. Built with durable, high-quality materials, it ensures longevity and reliability even in demanding operational environments. The multi-stage pumping system delivers optimal pressure and flow rates, making it an ideal solution for irrigation, municipal water supply, and dewatering tasks.

Technical Specifications

Design Features

- Multi-stage pumping system
- Submersible configuration
- Heavy-duty construction

Suitable Applications

Irrigation, Water Supply, Dewatering, Borehole Extraction
