

Defrost Heating Element for Refrigeration Systems

This defrost heating element is designed for efficient and reliable defrosting in refrigeration systems. The element features a durable metal construction with a multi-loop design to maximize heat distribution.

Product Overview

High-Efficiency Defrost Solution

This defrost heating element is engineered for reliable performance in demanding refrigeration environments. Featuring a robust metal construction with a multi-loop design, it ensures optimal heat distribution for efficient defrosting cycles. Designed for versatility, it is an ideal component for refrigerators, freezers, and various industrial cooling systems, offering safe and straightforward electrical integration.

Technical Specifications

Construction	Durable metal construction with multi-loop design
Electrical Connection	Insulated electrical leads

Applications

Compatible Equipment	Refrigerators, Freezers, Cooling Equipment
