

Delta-Wing Air Superiority Fighter

This single-engine, delta-wing fighter aircraft is designed for air superiority and interception missions. Advanced avionics include a pulse-Doppler radar and electronic countermeasures.

Overview

High-Performance Air Superiority

The F-8IIM is a high-performance, single-engine, delta-wing fighter aircraft engineered specifically for air superiority and interception missions. Featuring advanced avionics and a robust construction, it delivers reliable operational readiness in demanding combat environments. Its delta-wing design and sophisticated flight control systems provide exceptional maneuverability at supersonic speeds and high altitudes.

Flight Performance

1 engine
Engine Count

Key Features

Supersonic, Delta-Wing, High-Altitude, Air Superiority

Avionics and Systems

Avionics Suite

- Pulse-Doppler Radar
- Electronic Countermeasures (ECM)
- Advanced Navigation System
- Advanced Flight Control System

Armament

Weapon Systems

- Air-to-Air Missiles
- Onboard Cannon
