

Diesel Engine Driven Centrifugal Pump Unit

This power transmission unit features a heavy-duty diesel engine coupled with a centrifugal pump. It is mounted on a sturdy steel frame and equipped with a radiator and control panel.

Overview

High-Performance Centrifugal Pump Unit

This diesel engine-driven centrifugal pump unit is engineered for reliable, high-volume water transfer in demanding industrial and agricultural environments. Built on a heavy-duty steel frame, the unit combines robust power transmission with efficient cooling systems to ensure consistent performance. It features an integrated control panel for streamlined operation, making it a dependable solution for fluid management tasks.

Technical Specifications

Engine Type	Diesel Engine
Cooling System	Radiator

Construction

Frame Material	Steel
Color Scheme	Yellow, Blue

Features

Key Features

- Heavy-duty construction
- Integrated control panel
- High-volume water transfer capacity
- Efficient radiator cooling

Applications

Suitable Applications

Industrial • Agricultural • Water Transfer
