

Diesel Engine Driven Marine Water Pump

This marine diesel water pump is designed for fire suppression and general water transfer. Its compact size and lightweight construction provide easy mobility.

Product Overview

Versatile Marine Pumping Solution

This diesel engine driven marine water pump is engineered to provide reliable performance in demanding maritime environments. Specifically designed for deck washing and emergency fire fighting operations, the unit offers robust operation independent of external power sources. It is available in various configurations to suit specific boat requirements, ensuring high efficiency and adaptability for critical shipboard tasks.

Technical Specifications

Cooling Modes

- Air cooled (fan and radiating water tank)
- Water cooled (seawater/fresh water heat exchanger)

Supported Pump Series	SWZ series, CWL series, CIS series
Startup Mechanism	Electric startup with provided battery

Features

Primary Applications

Fire Fighting • Deck Washing • Bilge Pumping • General Water Transfer

Operational Highlights

- Self-priming capability
- Portable frame with wheels
- Durable marine-grade construction
- Easy maintenance access
