

Diesel Engine Water Pump

This water pump is designed for diesel engines. It ensures efficient coolant circulation, maintaining optimal engine temperature.

Product Overview

High-Performance Diesel Engine Water Pump

This robust water pump is engineered for heavy-duty diesel engine applications, ensuring efficient coolant circulation to maintain optimal operating temperatures. Designed for durability and reliability, the unit features a cast metal housing and a precision-engineered impeller to prevent overheating and extend engine service life. It is an essential component for demanding machinery environments, offering secure installation and leak-resistant performance.

Technical Specifications

Design Features

- Cast metal housing
- Mounting flanges for secure installation
- Curved vane impeller
- Central hub for pulley attachment
- Rubber gasket seal

Material	Cast Iron / Cast Metal
Identified Part Numbers	3286275, 3928395

Applications

Compatible Machinery Types

Bus • Truck • Bulldozer • Excavator • Generator • Tractor • Marine Engine • Construction Machinery
