

Diesel Generator Set for Marine Applications

This diesel generator set is designed for shipbuilding and marine applications. It provides auxiliary power and features a robust engine coupled with an alternator, enclosed within a protective housing.

General Overview

Marine Power Solution

This diesel generator set is engineered specifically for marine environments, providing essential auxiliary power for vessels. Featuring a robust integrated engine and high-performance alternator, the unit is designed for reliable operation in demanding maritime conditions. The included control panel allows for seamless monitoring and efficient management of the onboard power supply.

Primary Application

Marine • Shipbuilding • Auxiliary Power

Technical Features

System Configuration

- Integrated diesel engine
- Coupled alternator
- Protective sound-attenuating housing
- Integrated monitoring control panel

Operational Readiness

1 High

Reliability Standard
