

Diesel High-Pressure Water Pump

This high-pressure water pump features a powerful diesel engine. It is suitable for irrigation, construction, and emergency water transfer.

Overview

High-Performance Diesel Water Pump

This diesel-powered high-pressure water pump is engineered for reliability and consistent performance in demanding environments. Featuring an advanced combustion chamber design, it offers exceptional fuel efficiency and stable power output. Built with a heavy-duty frame and anti-vibration technology, the unit ensures smooth operation and extended service life for critical irrigation and drainage tasks.

Technical Specifications

Engine Model Identifier	178F
Pump Body Material Options	Aluminum Alloy, Cast-iron
Mechanical Sealing	High quality ceramic

Performance Features

Key Performance Benefits

- Easy and fast starting
- Smooth operation with low vibration
- Low running temperature
- Exceptional fuel efficiency

Applications

Application Scope

Orchard Irrigation • Crop Irrigation • Construction Sites • Mining Water Pumping • Municipal Drainage
