Overview

Reliable Power Generation Solution

This diesel generator set is engineered for robust performance and dependability, featuring an optimized combustion and fuel-supply system that maximizes efficiency. Designed for both prime and standby power needs, the unit includes a high-performance, brushless self-excited alternator with advanced protection capabilities. The integrated intelligent control system provides automated start/stop functionality, data measurement, and comprehensive alarm protection for seamless operation.

Engine Specifications

Engine Features

- Optimized combustion system
- High-precision fuel supply
- Easy access for daily maintenance
- Strong component commonality

Alternator Specifications

Insulation Class

Class H

Protection Class

IP23

Alternator Type

4-pole brushless self-excited

Control System

Controller Functions

Auto Start/Stop, Timely Inspection, Data Measurement, Alarming Protection, Remote Signal Control

Design & Build

Enclosure Features

- Noise reduction
- Weather protection
- Robust base frame for easy transport
