

Diesel Water Pump for High-Volume Transfer

This diesel water pump is a robust solution for high-volume water transfer. Powered by an air-cooled diesel engine, it delivers reliable performance in demanding environments.

Product Overview

High-Volume Diesel Water Pump

This robust and efficient water pump is engineered for high-volume transfer applications in demanding environments. Powered by a reliable air-cooled diesel engine, it offers excellent fuel efficiency and consistent performance. Its durable construction and portable frame design ensure longevity and ease of transport, making it an ideal solution for agricultural, construction, and emergency water management needs.

Performance Metrics

Performance Highlights

1 Yes

Self-Priming Capability

Technical Specifications

Engine Type	Air-cooled diesel engine
Primary Applications	Agricultural, Construction, Emergency Water Management

Design Features

Key Design Features

- Robust, durable construction
- Portable frame design
- High flow rate capacity
- Fuel-efficient diesel operation
