

Diesel Water Pump Generator

This portable diesel generator features a diesel engine and centrifugal pump assembly. It is encased in a protective steel frame for durability and portability.

Overview

High-Performance Diesel Water Pump

This portable diesel-powered water pump generator is engineered for demanding fluid transfer applications in irrigation and construction environments. Combining a robust diesel engine with a high-efficiency centrifugal pump, it delivers reliable performance for moving large volumes of water. The entire assembly is protected by a heavy-duty steel frame, ensuring durability on job sites and ease of transport.

Technical Specifications

Engine Type	Diesel
Pump Type	Centrifugal
Key Features	Portable, Steel Frame, High-Flow, Industrial Grade

Applications

Suitable Applications

- Agricultural Irrigation
- Construction Site Dewatering
- Flood Control
- General Water Transfer
