

Diesel Water Pump

This diesel water pump is engineered for high-volume water transfer. Its robust diesel engine and centrifugal pump ensure reliable operation for diverse applications.

Product Overview

High-Performance Diesel Water Pump

This advanced diesel water pump unit is engineered for efficiency, stability, and reliability in demanding environments. Featuring a high-performance engine and pump combination, it offers low vibration and noise levels, ensuring smooth operation. The system includes an intelligent control interface for monitoring critical parameters such as machine runtime, oil pressure, and coolant temperature, with both manual and automatic control options available.

Operational Features

Control System Capabilities

- Intelligent monitoring system
- Real-time display of runtime, oil pressure, and coolant temperature
- Emergency stop button for engine safety
- Manual and automatic operation modes

Design Advantages

High Efficiency, Low Vibration, Low Noise, Easy Assembly/Disassembly, Reliable Operation

Applications & Configurations

Optional Configurations

Mobile Trailer • Outdoor Rain Cover

Primary Applications

Municipal Sewage, Flood Control, Drought Relief, Agricultural Irrigation
