

Diesel Welding Generator

This diesel welding generator combines the functions of a diesel generator and a welder. It delivers both welding current and AC power output for versatile use.

ADDITIONAL IMAGES

Overview

Versatile Power and Welding Solution

This open-type diesel welding generator is a robust machine engineered to combine the functions of a diesel generator and an arc welder in one unit. Designed for demanding environments like construction sites and remote locations, it provides reliable AC power alongside high-performance welding capabilities. The open-frame design ensures optimal ventilation and easy maintenance access, while the wheeled chassis offers excellent maneuverability for on-site tasks.

Technical Specifications

Power Rating

5000 W

Rated Output

Model Number	TP6500DGW
Rated Frequency	50 Hz
AC Output Voltage	220V

Compliance & Quality

Certifications	CE, ISO 9001
----------------	--------------

Features

Key Features

- Dual-function: Diesel Generator & Welder
- Open-frame design for ventilation
- Wheeled chassis for portability
- Key start system
- Integrated voltage regulator
- Output monitoring gauge
