

Digital Network Communication Device with Odor Control

This is a digital network communication device with a control panel and display. The device also features negative ion sterilization for odor removal and freshness.

Product Overview

Advanced Network Communication & Air Purification

This digital network communication device integrates advanced air quality management with reliable connectivity features. Designed for professional environments, it utilizes negative ion sterilization technology to effectively eliminate odors and maintain a fresh, hygienic atmosphere. The unit features an intuitive digital control panel, making it a versatile solution for spaces requiring both communication capabilities and environmental control.

Core Technology

Key Benefits

- Eliminates unpleasant odors
- Promotes a fresh and healthy environment
- Clean and hygienic sterilization method

Sterilization Technology

Negative Ion Sterilization, Odor Removal, Air Purification

Hardware Interface

Control Interface

Digital Display • Push-Button Controls

Design Features

- Black finish
- Dual compartments
- Metallic framed windows
