

Digital Terrestrial TV Receiver

This digital terrestrial receiver provides superior picture and sound. It is designed for compatibility with various TV systems and has necessary ports for connectivity.

Overview

Digital Terrestrial TV Receiver DVT-4701

The DVT-4701 is a compact and efficient digital terrestrial receiver designed for free-to-air (FTA) broadcasts. Featuring standard definition MPEG-2 decoding and DVB-S compatibility, it provides a reliable solution for accessing digital television signals. Its small 130mm form factor and plastic housing make it an unobtrusive addition to any entertainment setup, while optional USB and SD card support offer enhanced functionality for PVR capabilities.
